

Software Developer

(Digital BSS – Full Stack React/Angular + Node.Js)

Range: up to 32M Gross

Location: District 1, HCM

Process Interview: 2 Rounds (R1: Technical Test | R2: Team Leader/DM)

We are looking for a software developer to join our DevOps team.

You'll be in a dynamic team that continuously improves our digital BSS suite using latest technologies

Responsibilities

- Work with architects to understand end-to-end architecture, and individual application architecture
- Work with business analysts to understand business requirements
- Produce technical design document for assigned modules, and develop according to specification
- Collaborate with other developer for API integration, and system integration tests
- Follow good coding practice to produce clean, readable, testable, and secure code
- Develop, test and maintain web applications frontend using Angular/ React/JavaScript/HTML/CSS.
- Implement responsive web design principles to ensure the application works seamlessly on various devices and screen sizes
- Develop, test and maintain web application backend using Nodejs/Express, with SSR or APIs
- Support fortnightly deployments.
- Provide L3 support for production
- Senior developers are expected to participate in architecture/framework discussion, improve development process, and conduct code reviews

Requirements

- Proficiency in HTML5, CSS3, and modern JavaScript with Typescript, and experience with React/Angular
- Good understanding of responsive design principles
- Understanding of state management Redux or equivalent
- Good understanding of RESTful API and able to make API in Express
- Knowledge of Webpack, npm and/or Yarn
- Good knowledge of RDBMS, SQL, and ORM; experience with NoSQL/distributed caching solutions preferred
- Solid understanding of Object-Oriented Programming (OOP) principles
- Some experience with container technologies - docker/docker swarm, Kubernetes preferred
- Some experience with API gateway preferred
- Familiarity with microservice based application architecture preferred
- Good working knowledge of the Software Development Lifecycle and has experience using tools such as GIT and JIRA
- Some functional knowledge of telco BSS highly preferred; experience with TMF SID/Open API a big plus
- Minimum 2 years development experience
- Diploma/Degree
